Risk Warning

Caution! Beware of frontrunning in the mempool when minting popular brc-20 assets.

There is a potential risk of losing funds when minting new brc-20 assets during network congestion. The minting of popular brc-20 assets is often the main cause for network congestion.

If the network fee rate of your transaction is too low, your transaction will not be confirmed until the minting event is 100% complete. In this scenario, you will not receive any brc-20 assets and the network fee you have paid cannot be refunded.

This frontrunning is due to how Bitcoin miners process transactions. Bitcoin miners create blocks by including transactions ordered by the highest network fee rate. Higher fee rates are prioritized, even if the transaction was submitted later.

☐ Don't remind anymore

Risk Warning

1.In case of platform order congestion, there might be delays in on-chain processing, and we cannot guarantee the on-chain processing time.

2.The rate you submit now does not represent the real-time on-chain rate. Please be aware of the fluctuating on-chain rate.

3.If there are unconfirmed outbound transactions in your payment account, please stop the payment or switch to another account for operation.

4.When encountering orders with ongoing engraving, please patiently wait for the miner's confirmation, as the transaction cannot be revoked.

Please carefully evaluate and ensure that you fully understand these risks, and are willing to bear all consequences arising from them.

I have read and agreed to the risk warning
